Understanding Depression: Definitions and Types

What Is Depression?

Depression, clinically known as major depressive disorder (MDD), is a mental health condition characterized by persistent feelings of sadness, loss of interest or pleasure in activities, and a range of emotional and physical problems. It affects how individuals think, feel, and behave, often leading to significant impairment in daily functioning. Unlike temporary sadness, depression is a prolonged state that requires treatment and support.

Types of Depression

Depression is not a singular condition but encompasses various types, each with distinct features:

- **Major Depressive Disorder (MDD):** Characterized by severe symptoms that interfere with daily life, lasting at least two weeks.
- **Persistent Depressive Disorder (Dysthymia):** A chronic form of depression with less severe symptoms but lasting for at least two years.
- **Bipolar Disorder:** Features episodes of depression alternating with mania or hypomania.
- **Postpartum Depression:** Depression occurring after childbirth, affecting new mothers.
- **Seasonal Affective Disorder (SAD):** Depression linked to seasonal changes, typically in winter months.

Global Prevalence of Depression
