Calculating Surface Area of a Triangular Prism

Formula for Surface Area

The surface area (SA) of a triangular prism is the sum of the areas of all its faces:

$$\text{SA} = 2 \times \text{Area of triangle} + \text{Area of three rectangles}$$

Expressed mathematically:

$$\text{SA} = 2 \times \left(\frac{1}{2} \times \text{base} \times \text{height of triangle} \right) + \text{perimeter of triangle} \times \text{length of the prism}$$

Breaking down the formula:

- Calculate the area of one triangular base
- Find the perimeter of the triangle
- Multiply the perimeter by the length (height) of the prism for the lateral surface area
- Add the areas of the two triangles

Step-by-Step Calculation Process

- Identify all dimensions:
 - Base length of the triangle
 - Height of the triangle
 - Length of the prism (distance between the two triangular bases)
 - Lengths of the sides of the triangle (if needed for perimeter)
- Calculate the area of one triangle:

$$\text{Area}_{\text{triangle}} = \frac{1}{2} \times \text{base} \times \text{height}$$

- Calculate the perimeter of the triangle:

$$\text{Perimeter} = \text{side}_1 + \text{side}_2 + \text{side}_3$$

- Calculate the lateral surface area:

$$\text{Lateral area} = \text{Perimeter} \times \text{length of the prism}$$

- Combine all parts for total surface area:

$$\text{Surface Area} = 2 \times \text{Area}_{\text{triangle}} + \text{Lateral area}$$
