- Triggered by user actions such as field changes, form open/close events.
- Used for real-time validation, dynamic field visibility, or populating dependent fields.
- Written in Remedy's proprietary scripting language.
- Example: When a user selects a specific category, an active link displays additional fields relevant to that category.

Filters:

- Server-side scripts executed on the AR System server.
- Triggered by database events such as record create, modify, or delete.
- Used for data validation, record manipulation, notifications, and process automation.
- More powerful as they can perform complex logic and interact with multiple forms.
- Example: Automatically assign a ticket to a technician when a new incident is created with a specific priority.

Differences summarized:

Aspect	Active Links	Filters
Execution Layer	Client-side	Server-side
Triggered By	User actions	Database events
Typical Use	UI validations, dynamic UI changes	Data validation, workflow automation
Complexity	Generally simpler	Can be complex and powerful

Understanding the appropriate use cases for Active Links and Filters is critical for designing efficient and maintainable Remedy applications.
