Sample Questions and Their Answers from Geometry Quiz 2 Form G

Below are some typical questions you might encounter, along with detailed solutions based on the answers provided in the quiz key.

Question 1: Find the value of x in the diagram where two angles are supplementary, and one angle measures $(3x + 10)$ degrees.

Answer:

Since the angles are supplementary, their sum is 180° .

Therefore:

$$(3x + 10) + \text{other angle} = 180^\circ$$

Assuming the other angle is $(2x + 20)$:

$$(3x + 10) + (2x + 20) = 180$$

Combine like terms:

$$5x + 30 = 180$$

Subtract 30 from both sides:

$$5x = 150$$

Divide both sides by 5:

$$x = 30$$

Explanation:

By setting up the equation based on the supplementary angles' sum, students can see how to solve for the variable.

Question 2: Determine whether triangles with sides 7 cm, 24 cm, and 25 cm are right-angled.

Answer:

Use the Pythagorean theorem:

Check if $(\text{shorter sides})^2 + (\text{middle side})^2 = (\text{longest side})^2$

Calculate:

$$7^2 + 24^2 = 49 + 576 = 625$$

Compare with $25^2 = 625$

Since both are equal, the triangle is right-angled.

Explanation:

This solution demonstrates the application of the Pythagorean theorem to verify the right-angled nature of a triangle based on side lengths.
