Understanding Short Term Memory Loss

What is Short Term Memory?

Short term memory (STM) refers to the capacity to hold a small amount of information in an active, readily accessible state for a brief period—typically seconds to minutes. It is essential for daily functioning, allowing individuals to remember phone numbers, directions, or recent conversations.

Types of Memory Loss

Memory loss can be:

- Short term (working memory): Temporary, often reversible.
- Long term: Persistent, involving permanent changes or damage.
- Retrograde: Loss of memories formed before a certain point.
