Brake Pedal Arm

The brake pedal arm is the lever that the driver presses. It transmits the force applied by the foot to the push rod. The arm is usually made of steel for strength and durability and is designed to pivot smoothly.

Pivot Pin and Bracket

The pivot pin allows the pedal arm to rotate. It is secured within a bracket, which is mounted to the vehicle's firewall or dash panel. Ensuring the pivot pin is well-lubricated and undamaged is vital for smooth operation.

Brake Pedal Pad

This is the rubber or textured surface where the driver places their foot. Its condition directly impacts driving comfort and safety. Worn or damaged pads should be replaced promptly.

Return Spring

The return spring pulls the pedal back to its resting position after release. It must be strong enough to return the pedal quickly and position it correctly for the next use.

Push Rod or Linkage

Connecting the pedal to the master cylinder or brake booster, this component transmits the mechanical force. In some models, this linkage is adjustable for pedal height or feel.

Brake Light Switch

Mounted near the pedal, this switch activates the brake lights when the pedal is pressed. Proper adjustment ensures the brake lights function correctly, avoiding safety hazards.

Vacuum Brake Booster

In vehicles equipped with a power brake booster, the booster amplifies the force applied by the driver, making it easier to brake. The assembly diagram shows how the pedal connects to the booster.

Master Cylinder

The master cylinder converts mechanical force into hydraulic pressure, which then actuates the brake calipers or wheel cylinders. Its position and connection to the pedal assembly are critical for proper brake function.
